

・ 計算練習問題（初級） 分配法則

1. 分配法則とは

$$(a \times b) \times \boxed{C} = a \times \boxed{C} + b \times \boxed{C}$$

2. 分配法則

<p>(1) $(-\frac{1}{2} + \frac{3}{4}) \times 8$ $= -\frac{1}{2} \times 8 + \frac{3}{4} \times 8$ $= -4 + 6$ $= \underline{2}$</p>	<p>(2) $24 \times (-\frac{1}{3} + \frac{1}{4})$ $= 24 \times (-\frac{1}{3}) + 24 \times \frac{1}{4}$ $= -8 + 6$ $= \underline{-2}$</p>	<p>(3) $12 \times (-\frac{1}{3} + \frac{1}{12})$ $= 12 \times (-\frac{1}{3}) + 12 \times \frac{1}{12}$ $= -4 + 1$ $= \underline{-3}$</p>
<p>(4) $(-8) \times (\frac{1}{2} + \frac{1}{4})$ $= -8 \times \frac{1}{2} + (-8) \times \frac{1}{4}$ $= -4 - 2$ $= \underline{-6}$</p>	<p>(5) $5 \times (\frac{1}{5} - \frac{3}{10})$ $= 5 \times \frac{1}{5} + 5 \times (-\frac{3}{10})$ $= 1 - \frac{3}{2}$ $= \underline{-\frac{1}{2}}$</p>	<p>(6) $2 \times (\frac{3}{2} + \frac{1}{4})$ $= 2 \times \frac{3}{2} + 2 \times \frac{1}{4}$ $= 3 + \frac{1}{2}$ $= \underline{\frac{7}{2}}$</p>
<p>(7) $-2 \times (3 + \frac{1}{2})$ $= -2 \times 3 + (-2) \times \frac{1}{2}$ $= -6 - 1$ $= \underline{-7}$</p>	<p>(8) $4 \times (-2 + \frac{1}{4})$ $= 4 \times (-2) + 4 \times \frac{1}{4}$ $= -8 + 1$ $= \underline{-7}$</p>
